Product Manager
Azara Healthcare

Introduction to Azara Cost & Utilization (ACU)

Powered with DRVS Plan Data

Azara Cost & Utilization (ACU) leverages payer data from DRVS to facilitate management of value-based care arrangements through analytics and visualizations.

Value of ACU

Improve success in value-based care contracts

Understand medical and Rx costs across the provider network

Track utilization for primary care episodes outside of the members assigned practice

Monitor avoidable inpatient and emergency department (ED) utilization

Promote to ACC for triage and evaluation by Care Management resources

ACO
ACCOUNTABLE CARE ORGANIZATION

CIN
CLINICALLY INTEGRATED NETWORK

KEYS TO SUCCESS IN MEDICARE SHARED SAVINGS PROGRAM (MSSP)

KEYS TO SUCCESS IN THE MEDICARE SHARED SAVINGS PROGRAM

WHERE DOES YOUR HEALTH CENTER NEED SUPPORT AND EDUCATION?

Data Infrastructure:

Utilize ODIP (Ohio Data Integration Platform) powered by Azara DRVS and Azara Cost and Utilization to analyze, identify trends and opportunities for cost reduction and quality improvement.

Annual Wellness Visits:

Conduct Medicare “Annual Wellness Visits”—a comprehensive visit paid for each Medicare beneficiary once a year—to maximize attribution.

HCC Capture and Recapture:

Implement a coding specificity improvement program, to appropriately link ICD-10 codes to HCC groups which drive the target baseline cost.

Focused Quality Improvement:

Develop standards around key ACO quality measures to ensure that savings created are paid to the ACO.

Care Management:

Conduct care management activities for high and rising risk patients to support self-management, improve health outcomes and impact cost.

Transitions of Care:

Implement a structured follow-up program for patients post discharge from a hospitalization or emergency department visit improving health care quality and patient experience and reducing hospital readmissions and cost.

Strategy to Improve VBC Success

VALUE BASED CARE PRACTICE ASSESSMENT TOOL

VBC Practice Assessment Tool

- VBC Practice Assessment Tool implemented with Health Centers Quarter I 2025
- A Value-Based Care Practice Assessment Tool is designed to help healthcare organizations evaluate how effectively they are implementing value-based care principles in their practices. This tool helps assess various aspects of care delivery to ensure it aligns with the core goals of value-based care: improving patient outcomes, reducing costs, and enhancing the patient experience.
- The goal of the Practice Assessment Tool is to provide a comprehensive overview of the organization's readiness and effectiveness in value-based care.
- The results should highlight: strengths that can be leveraged for success in VBC, areas for improvement where resources and strategic initiatives are needed and prioritization of improvement opportunities based on their potential impact on patient outcomes, cost efficiency, and overall care delivery.

VALUE BASED CARE PRACTICE ASSESSMENT TOOL

3 Assessment Categories

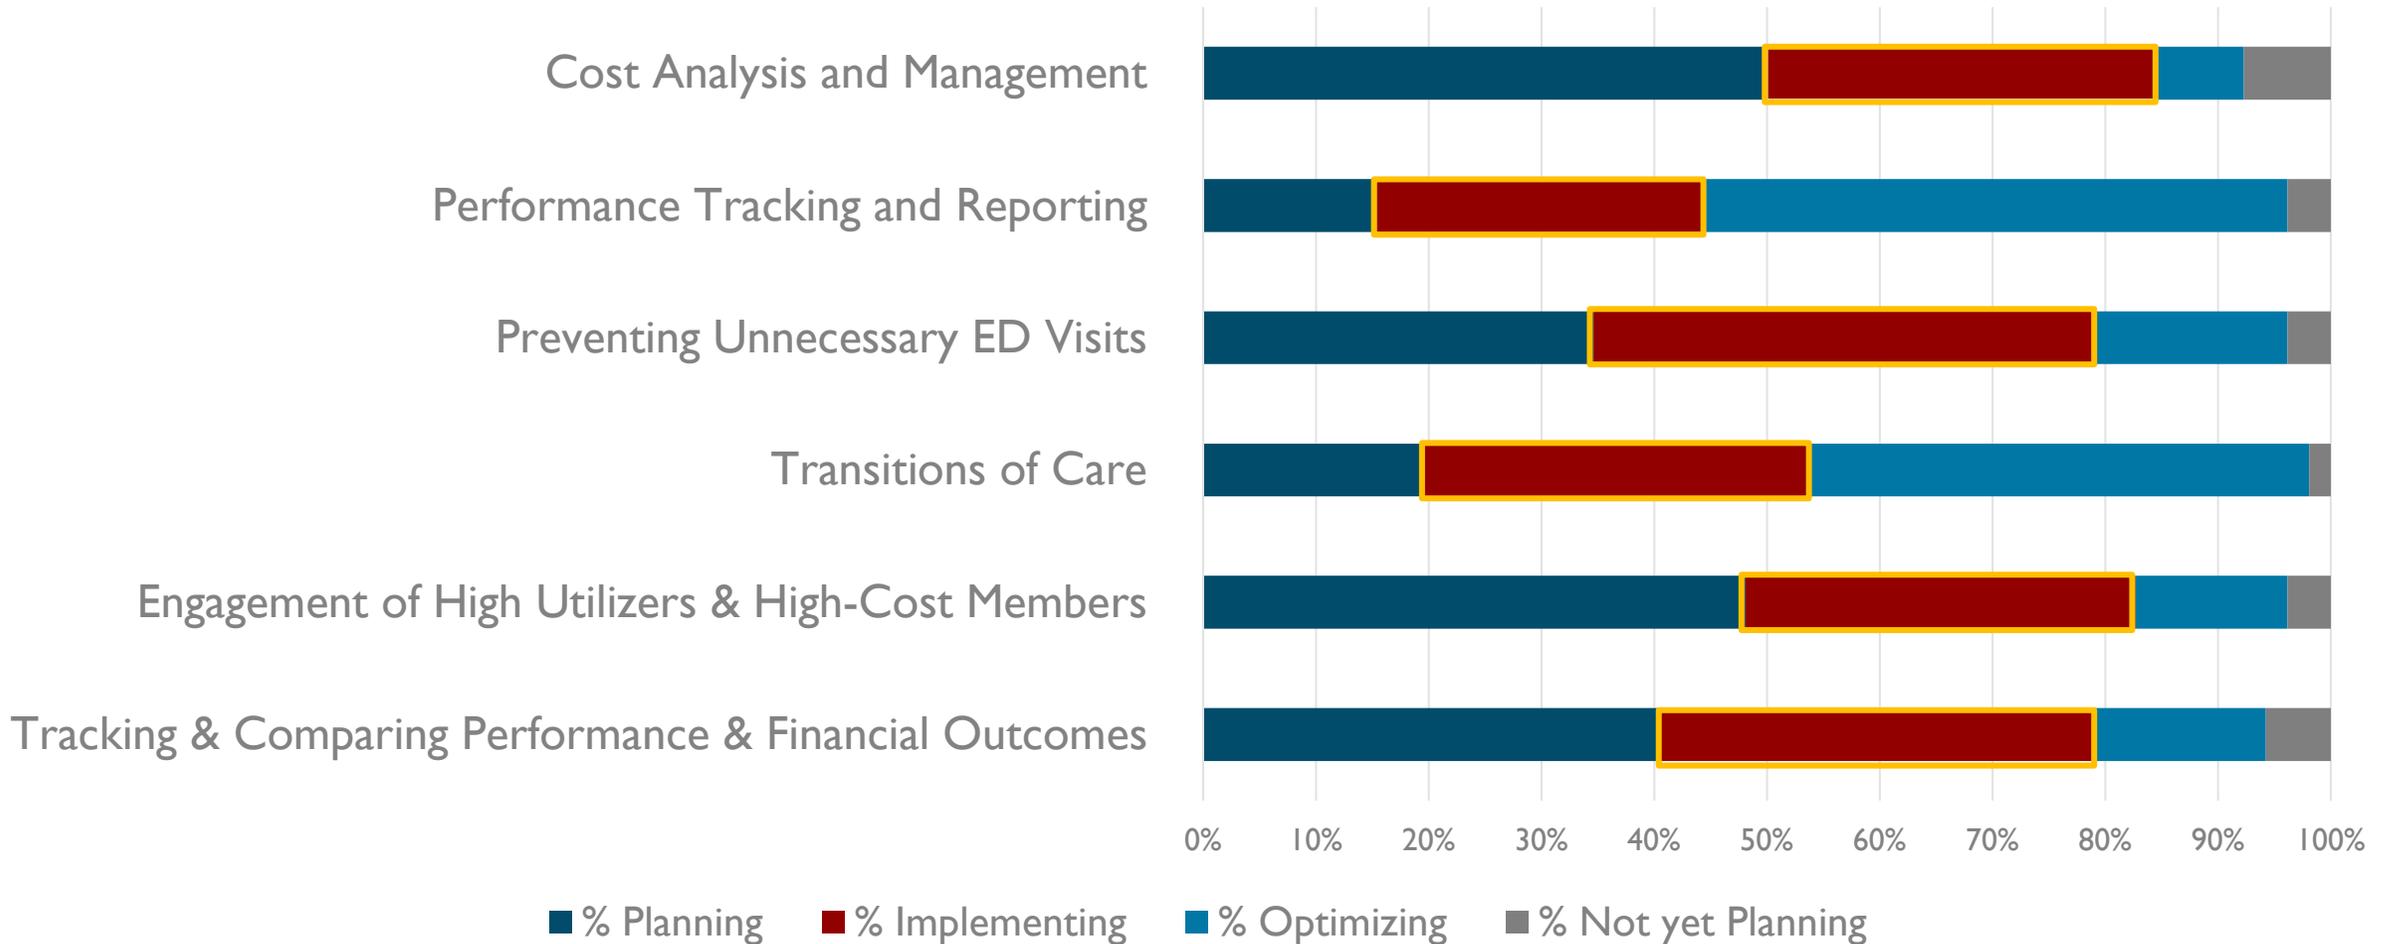

Value-Based Care
Framework & Strategy

Care Delivery

Population Health & Data Analysis

Objective	Definition
Tracking and Comparing Performance and Financial Outcomes	A structured process to track progress on value-based care goals, including total cost of care and quality improvement, with ongoing comparison of expected vs. actual performance in both outcomes and revenue
Engagement of High Utilizers and High-Cost Members	Identify and engage high utilizers, high-risk members, and high-cost individuals to implement targeted interventions, improve care coordination, and reduce unnecessary healthcare utilization
Transitions of Care	Establish a transitions of care process to manage individuals being discharged from the hospital or other healthcare institutions, ensuring seamless coordination, follow-up care, and addressing any gaps in treatment to prevent readmissions and promote continuity of care.
Preventing Unnecessary ED Visits	Follow up on preventable ED visits by contacting members who have used the emergency room for non-urgent care, addressing underlying health issues, enhancing care coordination, and implementing strategies to reduce future unnecessary ED visits
Performance Tracking and Reporting	Regularly track and report on performance indicators relevant to contracts, using a performance dashboard to capture key benchmarks and variances at both the care team and overall practice level.
Cost Analysis and Management	Analyze total cost of care per member, prescription drug costs, and high-cost members through data analysis to identify cost drivers, optimize formulary management, and implement targeted interventions to improve care efficiency, reduce unnecessary expenditures, and better manage high-cost care

AZARA COST AND UTILIZATION: MONTHLY TOTAL COST OF CARE FOCUS

Health Center's and Network have Access to Data

- Networking Call: Review of Monthly Total Cost of Care Focus
- Individual Health Center Meetings: Focus on Health Center Specific Data, Challenges, Workflows, and Successes

Monthly Total Cost of Care Topic:

- **Strategy:**
 - All Value Based Care Contracts have a monthly focus on Total Cost of Care.
 - For MSSP, all data comes from Azara Cost and Utilization
- **Why:**
 - Keep Health Center's engaged in Total Cost of Care
 - Break workload down into smaller more concrete actions
 - Monthly list of patients to research and outreach
- **Intended Outcome:**
 - Monthly impacts on Total Cost of Care to slowly decrease cost

MONTHLY TOTAL COST OF CARE FOCUS EXAMPLE: READMISSION DASHBOARD

This dashboard provides an overview of utilization trends for inpatient readmissions as well as the opportunity to identify patterns for potentially preventable or avoidable admits as defined by Hopkins ACG.

The following visit classifications are categorized as 'Avoidable':

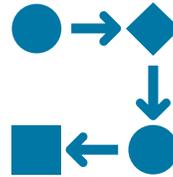

- **Non-emergent:** presenting symptoms or medical conditions indicate that immediate care was not required
- **Emergent, Primary Care Treatable:** immediate care was required, but the condition did not require resources that are primarily available in the ED. The same treatment could have been provided effectively and safely in a primary care setting
- **Emergent, ED Needed - Preventable/Avoidable:** emergency treatment and ED resources were required, but the condition could have been prevented or avoided with adequate care in an ambulatory setting

MONTHLY TOTAL COST OF CARE FOCUS EXAMPLE: HOSPITAL READMISSIONS

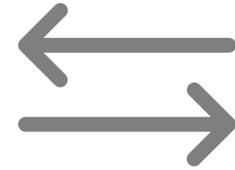

Goal:

Reduce Avoidable Readmissions

ACU Workflow:

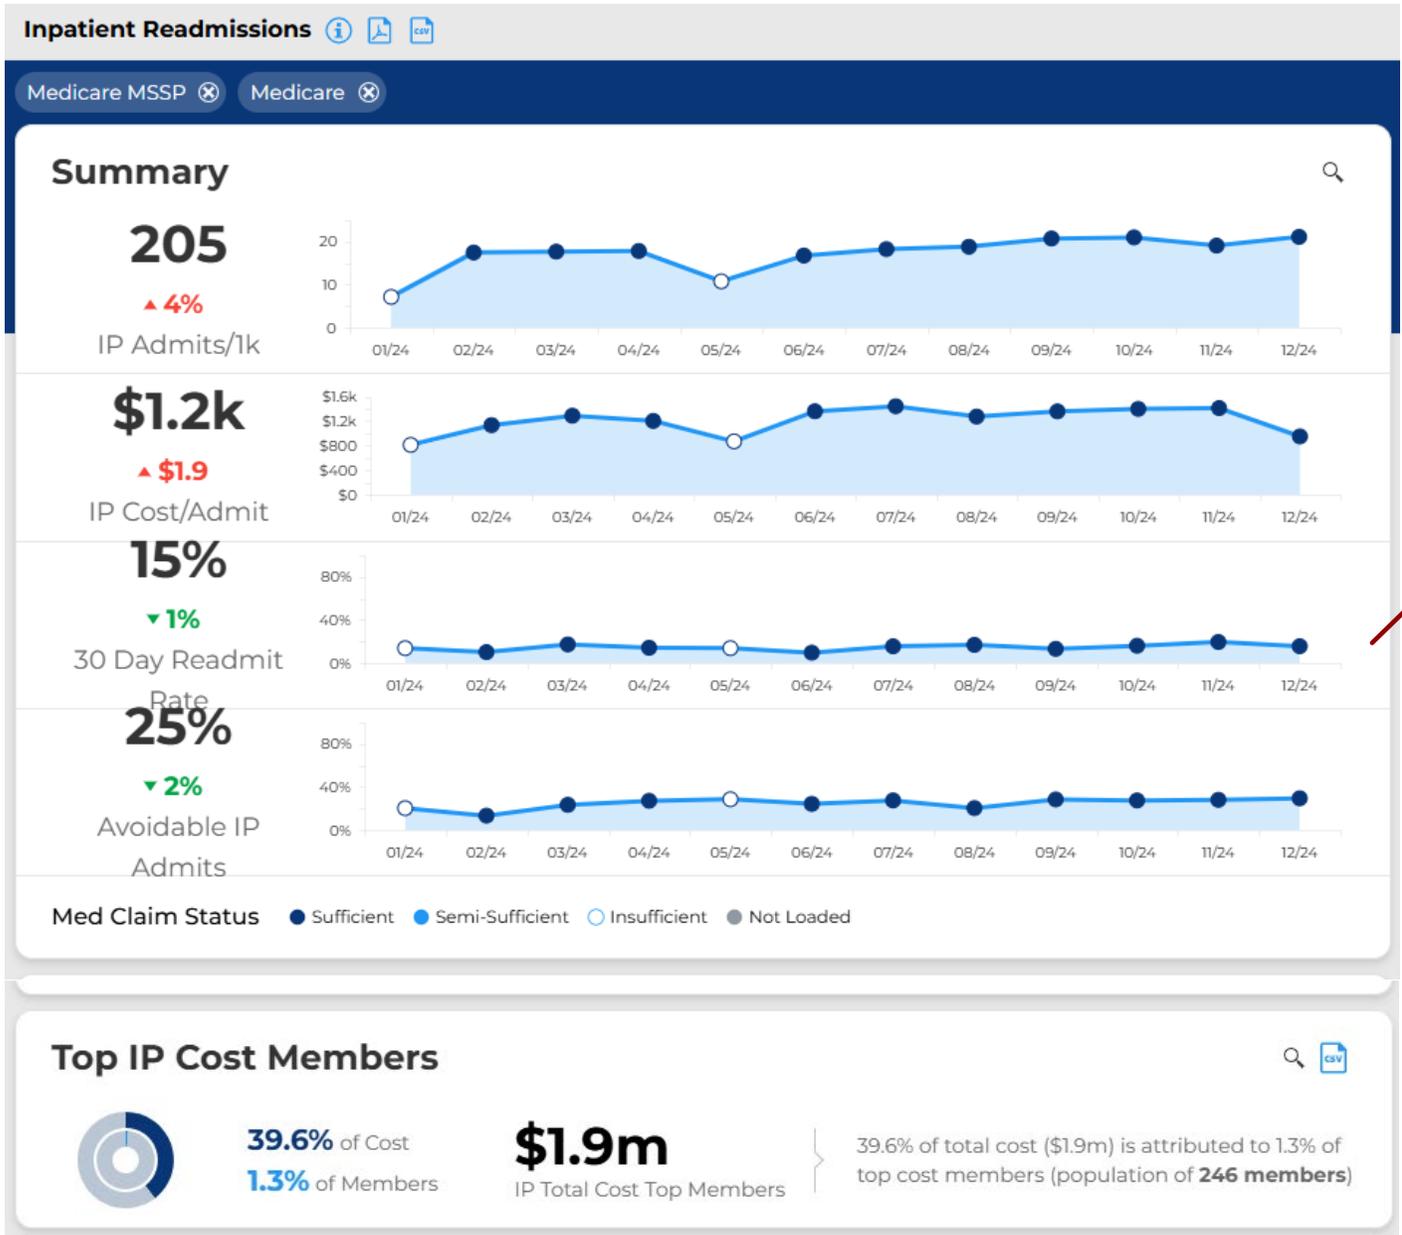

Inpatient Readmission Dashboard
→ Review Avoidable IP Admits
Measure → Analyze by
groupings/filters → Review patient
details and add in “avoidable” Visit
Classification → Analyze members
in Member Profile

Impact:

What can you provide at your
health center?
Develop TOC process, Leverage
telehealth etc.

READMISSIONS DASHBOARD

Use to track efficiency of Transitions of Care (TOC) efforts

Identify members with avoidable admits

Identify members that are driving the cost

READMISSIONS DASHBOARD - AVOIDABLE IP ADMITS

1. Add Visit Classification Filter
 - Emergent, Primary Care Treatable
 - Non-emergent
 - Emergent, ED Needed, Potentially Avoidable
3. Filter by a low Resource Utilization Bands (RUB) to identify members that may be easily impacted

Visit Classification filter

Filter by Items: 3 / 6

- Emergent, ED needed, potentially avoidable
- Emergent, primary care treatable
- Non-emergent
- Emergent, ED needed, not potentially avoidable
- Injury, severe

EXPECTATIONS FOR USE

Monthly Use Expectation

Review Data Trends

Review Utilization Focus of the Month

Address Member level data

Addressing Non-Utilization

Monthly tracking of Utilization

Outreach to Individual Health Center to
troubleshoot issues and challenges

Network overview discussion of expectations

Network discussion of success and challenges

ADDRESSING INPATIENT READMISSIONS: WHAT CAN YOU DO?

Proactive Risk Identification:

- Identify high-cost patients early

Identify Patterns in Avoidable Readmissions

- Provide targeted interventions for frequent fliers
- Identify avenues where preventative care/early intervention could support

Establish a TOC Workflow

- Leverage TOC Integration in DRVS or CliniSync Notify to proactively follow up

Care Coordination:

- Assign care managers, improve specialist referrals, and integrate behavioral health

Chronic Disease Management:

- Implement evidence-based protocols, remote monitoring, and personalized care plans

Preventive & Urgent Care Access:

- Expand same-day visits, telehealth, and urgent care to reduce ED visits

Medication Management:

- Conduct medication reconciliation, deprescribing, and pharmacist-led interventions

Social Drivers Support:

- Address food insecurity, housing instability, and transportation barriers

Patient Engagement & Education:

- Offer health coaching, self-management tools, and motivational interviewing

EARLY SUCCESSSES AND CHALLENGES

Successes

- Senior Leadership Tracking
- Member Linkage to Case/Care Management for support and monitoring
- Leverage data with Local Hospital to show high inpatient admits than Regional Hospitals
- Data used to drive conversations to support community change
- Brought attention to identified focused diagnoses
- Easily Identifies where Health Center can take action
- Data are used to direct attention and identify areas where care management can focus, with the goals of improving patient outcomes and reducing costs
- Pulling data for monthly review with Chief Medical Officer (CMO) and Quality Improvement (QI) teams to identify opportunities for impacting high-cost users

Challenges

- Time
- Staffing
- Limited ability to impact external cost
- Timing of Pilot and launch to all centers

STRATEGY AND NEXT STEPS

Potential to Expand to CIN Payer Data

Will drive increased use of Azara cost and Utilization thus more focus on Total Cost of Care

One stop shop for all VBC contracts to address cost and utilization thus more attention to all contracts

Approach Payers to Cover Cost

Payer cost for both Azara Cost and Utilization and Azara Payer Integration

Show payer return on investment of decreased total cost of care

Ohio Data Integration Platform (ODIP) Practice Assessment Tool (PAT)

ODIP PAT includes ACU with the goal to assess usage and provide tailored T/TA for each health center

Collaboration with the OACHC HCCN

Next Wave of HCCN, expected to start this summer, has a VBC focus T/TA focus on ACU and VBC

NETWORK EXPANSION STRATEGY IN FUTURE YEARS

STRATEGY FOR WORKING WITH PLANS

Health Center Strategy

Encourage Data Sharing for all eligible plans

Encourage Payer Integration for Plans with Large Membership

Require Cost and Utilization Platform and Payer Integration for ACO Participation, funded by ACO

Troubleshoot Data Validation Issues with Health Center
Optimization of ODIP

Plan Strategy

Only establish Network Connection to ODIP with VBC Agreement

Troubleshoot Data Validation Issues with Plan

Propose Plans Help cover costs of Payer Integration and Cost and Utilization

Promote Success of Payer Integration and show impact on Plan Data

Other ACU Dashboards

Primary Care Leakage: Identify members receiving primary care outside of the defined network for potential reassignment by the health plan.

Network Leakage: Identify members with any episode of care (ex. Inpatient, Emergency, SNF, etc.) outside of the defined

Claim Completeness: Track claim lag trends to identify complete reporting periods and data feed concerns.

Dashboard Use Cases

Dashboard	Use Case(s)
Plan Performance	<ul style="list-style-type: none">• Track performance across arrangements to identify areas of opportunity and contracts requiring analysis
Executive	<ul style="list-style-type: none">• Identify focus areas of a contract that require further drill down (i.e. ED, Rx, etc.)
Network Leakage	<ul style="list-style-type: none">• Find where members are going for care outside the network and/or with non-assigned PCP,s how much that care costs, and the services most utilized.• Improve continuity of care by keeping members in-network while controlling cost of care and keeping revenue inside the network
Primary Care Leakage	<ul style="list-style-type: none">• Identify members with primary care episodes that did not occur at their plan assigned practice (both inside and outside of the defined network) for roster reassignment with the health plan
Emergency Utilization	<ul style="list-style-type: none">• Monitor and track emergency utilization trends• Identify patterns in avoidable ED visits to implement condition specific programs, thus reducing future avoidable visits
Inpatient Utilization	<ul style="list-style-type: none">• Monitor and track inpatient utilization trends• Identify patterns in avoidable IP admits to implement condition specific programs, thus reducing future avoidable admissions

Dashboard Use Cases (cont.)

Dashboard	Use Case(s)
Inpatient Readmissions	<ul style="list-style-type: none">• Monitor and track 30-day inpatient utilization trends• Identify patterns in 30-day IP admits to implement condition specific programs, thus reducing future readmissions
Rx Utilization	<ul style="list-style-type: none">• Manage Rx costs while identifying areas of opportunity for cost savings and/or more efficient prescribing patterns
Claim Completeness	<ul style="list-style-type: none">• Understand timing and sufficiency of claim volume, informing when and how to view data
Member Review	<ul style="list-style-type: none">• Review recommended members who have been identified based on cost, utilization, or risk of predicted IP hospitalization for promotion to Care Management for better care coordination
Member Profile	<ul style="list-style-type: none">• Investigate costs & utilization by member to identify if member may benefit from higher levels of care

Key Takeaways

Keep lists manageable so staff can effectively manage outreach and interventions

Prioritize by Impact to VBC performance and shared savings opportunities

Continue leveraging DRVS for TOC efforts, while monitoring the impact of efforts in ACU

Target members who are risky and/or have a risk of predicted IP hospitalization and intervene before they accrue costs and utilization

“We've got a lot of data in the industry, and not a lot of information.

I think understanding important elements of data for the purposes of maximizing quality and lowering cost of care is just a weakness that everyone has.

We need to focus on what data sources and what data processes and methods and solutions will get us to the right answer, cheapest, quickest and most effectively.”

— Craig Samitt, M.D.

Help us continue to improve

Achieve, Celebrate, Engage!

ACE'd it? Share your DRVS success story and become an Azara ACE!

Show your organization has used DRVS to **A**chieve measurable results, **C**elebrate improvement in patient health outcomes, and effectively **E**ngage care teams and/or patients. Stories should showcase how DRVS helped your organization overcome a challenge, the tools and solutions used to drive improvement and details of the successes that resulted from your initiatives. ACEs should be able to provide examples that quantify quality improvement, cost savings, operational efficiency or patient health improvement.

Benefits:

- Azara will help tell your story and provide a client-branded version for your use
- Potential to create a 2-4 minute video or hour-long Azara-hosted webinar
- Potential to be featured at next year's Azara User Conference
- Win Azara swag!

Submit your success story by completing the form [at this link](#).
