

# DRVS EHR Plug-In

## Seamless workflow integration for Azara DRVS within the EHR application

Providers and care team members who want access to their DRVS data at the point of care can use the Azara EHR Plug-In to avoid searching through patient charts or logging into multiple systems. The EHR Plug-In provides quick access to actionable insights from Patient Visit Planning (PVP) and Care Management Passport reports, along with additional data from DRVS and Azara Care Connect (ACC), helping teams identify care gaps and address key items during the patient visit.

### Sign into DRVS without exiting the EHR

**Abernathy, Colby**

Moderate (L2)

MRN: 000279887564

DOB: 12/18/1996 (29 yrs)

CM: Carrie Taylor

PLAN: Medicare Advantage

**Smart Summary**

**Unspecified Diagnoses:** There are **2 unspecified diagnoses** documented in the last year ("Unspecified mood [affective] disorder" and "Nicotine dependence, unspecified, uncomplicated"); consider re-evaluation of diagnoses to **specify severity**.

**Undocumented HCC RAF Diagnoses:** Mild intermittent asthma (J45.20, Pulmonary, low) and ADHD combined type (F90.2, Psychiatric, low) remain **unbilled** for the current year.

**Lab Trends:** A1c increased **25%** from 11.8 to 14.7 (May 2025 to Nov 2025). A1c is out of range at 14.7 (Nov 2025).

**Open Referrals:** There is **1 referral** open since Jun 2025 with **no scheduled appointment**. Patient has an SDOH factor of Transportation - consider **care coordination to assist with setting up transportation**.

**TOC Events:** Patient has had **3 ER visits** in the past 6 months.

## DRVS EHR Plug-In Key Benefits

- Provides a holistic patient view by enabling direct access to patient information, such as overdue vaccinations, screenings, and a variety of other clinical alerts while in the patient’s electronic chart.
- Enables transparency into open referrals—allowing providers to view outstanding referrals and assist the patient in progressing toward completing the recommended activity.<sup>1</sup>
- Surfaces plan data for the care team during patient visits, calling out care gaps that might require documentation or follow-up.
- The RAF Gaps tab surfaces opportunities for providers to address and take action on open RAF Gaps at the point-of-care by dismissing gaps that no longer apply to patients, deferring gaps that require further investigation prior to re-coding in the current year, or adding diagnosis codes directly to the patient’s chart during their encounter.<sup>2</sup>
- AI Patient Summaries, highlight key actionable insights in distinct Health Highlights Categories, prompting care teams to take action
- Alerts care teams to patients who are coming up on their Medicaid Redetermination date.

### Interested in learning more about the DRVS EHR Plug-In?

The EHR Plug-In for DRVS requires additional mappings. Contact your PCA/HCCN, Azara Representative or [solutions@azarahealthcare.com](mailto:solutions@azarahealthcare.com) for additional details, including pricing.

<sup>1</sup>The Referrals Module is an additional product. Contact your Azara representative for additional details.

<sup>2</sup>Adding RAF coding gap diagnoses to patient charts is an additional implementation and feature available for certain EHRs. Contact your Azara representative for additional details
